SECTION II - EXECUTIVE SUMMARY

This section is intended to be a brief overview of the project, based on our current site visit. Please read the report in its entirety for a complete understanding of our comments and opinions as presented herein.

Conformance to Plans and Specifications and Workmanship

The work is proceeding in general accordance with the Plans, Specifications, and other pertinent documents that we have reviewed to date.

The overall quality of workmanship is good.

Arena

The CD Drawings for pricing, dated August 13, 2010, were made available on August 18, 2010. The latest Drawings submitted were the 100% Construction Documents, dated October 15, 2010.

Revisions and additions in the Arena to support enhancements in program, services, MEP infrastructure, and interior finishes along with comments received by the Design Architect, the Developer, and the NBA were incorporated into the Construction Documents and an updated set was submitted on December 22, 2010. The final Drawings, incorporating all changes marked "Final Conformance Set," dated March 15, 2011, were made available on May 17, 2011. An update of the "Final Conformance Set" will be issued by March 2012.

Transit Connection

Mass Transit Improvement documents (Plans and Specifications Volumes 1 - 5), labeled "90% Submission," dated August 28, 2009, were provided for our review. The updated Construction Documents, marked "100% - Final Modifications," dated April 8, 2010, with Addenda 1 - 7 have been submitted.

Scheduled Completion

Arena

The latest Executive Level Summary AS 23, dated January 11, 2012 (Data Date), indicates substantial completion of the Arena to be attained by September 5, 2012, and the Site Work will be substantially completed in concurrence with the Arena.

Punch list work and Subcontractor close-outs will extend the construction term to a final completion date of June 30, 2013.

The GMP2 provides for an early completion bonus, which under the latest Schedule AS 23, would be earned in July 2012. The following criteria would need to be met:

- a. Owner may use and occupy the Arena
- b. Only punch list items remain
- c. The Architect of Record has issued a Certificate of Substantial Completion
- d. A TCO has been issued

The GMP2 executed as of March 9, 2012, incorporates all delays, extension of the construction term, consolidation of changes made throughout design development, and establishes the final completion date. The documents are under review and will be included in next period's report.

Based on our Construction Progress Chart, which compares the cash flow amount to the projected construction progress, the Project is on schedule for a final completion date, including punch list work, for June 30, 2013.

Transit Connection

The latest Schedule for the Transit Connection, prepared by John Civetta & Sons, Inc., dated April 20, 2012, indicates mobilization of the Project began on August 2, 2010, with completion scheduled for July 13, 2012.

The original construction term of 20 months (August 2, 2010 - April 2, 2012) was reasonable, but due to early delays had slipped by approximately 3½ months. Note that the Transit Connection is scheduled to open in conjunction with the Arena; therefore, the slippage will have no impact on the overall project schedule.

Open Issues/Comments

The following items are referenced by Report Number and Item Number.

This Period

25.1 The latest updated schedule for the LIML Stage 2 and Carlton Avenue Bridge, dated March 30, 2012 (Data Date) indicates the Carlton Avenue Bridge to be completed by October 3, 2012, 5 days beyond the first venue to be held at the Barclays Arena. The agreement between FCRC and the ESD stipulates the bridge to be complete and operational prior to receipt of the Temporary Certificate of Occupancy and the first venue held at the arena.

The Developer is optimistic they can reduce the completion date by 2 weeks.

Nevertheless, the EDC has requested that FCRC propose a mitigation plan to control and alleviate the traffic flow congestion for the first event at the arena, scheduled for September 28, 2012.

The Developers have proposed to DOT that they be allowed to receive approval for opening the Carlton Avenue Bridge with the installation of temporary street lighting and railing.

Previous Periods

24.1 A Notice of Bond Claim, dated March 2, 2012 has been received from the legal counsel representing J.T. Ryerson for materials furnished and/or supplied to ASI in the amount of \$19,126.82.

Update: Hunt Construction is in the process of resolving this bond claim.

22.1 ASI Ltd. – Storefront and Pre-weathered lattice panels

We were notified by the Developer on January 5, 2012, that the plant fabricating the curtain wall and pre-weathering the lattice panels, ASI Limited, has shut down all production and laid off all its workers.

The surety took possession of all inventory, equipment, and materials. The plant resumed business and opened on January 7, 2012, with 80% of the workers returning.

The following status and current schedule to be included in Hunt Construction's revised scheduled, AS-23, dated January 11, 2012 (Data Date) is noted:

	Pre-Weathering	<u>Assemblage</u>	Erections
Batch 1	Completed	Completed (Hoist-area remains)	Completed (Hoist-area remains, April 15, 2012)
Batch 2	Completed	Completed	Completed
Batch 3	80%	February 15 –March 15, 2012	March 1 – April 15, 2012 (Leave out area along 6 th Avenue construction ramp May 30, 2012)
Batch 4 (Non-enclosure including Entrance Canopy)	April 1, 2012	April 15 – May 30, 2012	June 15– July 15, 2012

Update: Batch 2 panel installations had resumed last period and are currently complete. All other operations have resumed including engineering, fabrication, production, assembly, and erection. Hunt Construction and the surety have coordinated a management program and recovery schedule with ASI cooperation intended to resolve the delays in the shop and field.

22.3 Mechanic's Lien

b. The law firm representing Hurricane Express which provided freight shipment services from ASI Limited contends that \$340,551.51 is owed. Although a lien has not been filed as indicated in its letter dated January 15, 2012, Hurricane Express will continue to preserve all remedies against ASI Limited, including a Mechanic's Lien and/or Bond Claim.

Update: Since no lien has been filed, no action is required at this time.

SECTION III - PROJECT SCOPE

The following description is distilled from our Project Review Report, dated November 30, 2009, and is a snapshot of the project scope at that time. A more detailed description of the project scope is contained in our Project Review Report.

The Atlantic Yard Project will consist of the redevelopment of 6 full and 2 partial City tax blocks, including the Metropolitan Transportation Authority (MTA) bus yard and the Long Island Rail Road (LIRR) Vanderbilt Rail Yard in the Prospect Heights section of Brooklyn, New York.

The site for the proposed arena project is located at the intersection of Flatbush and Atlantic Avenues.

The proposed project will entail the construction of a new 8-level, approximately 670,000-sq. ft., 18,103-seat capacity enclosed state-of-the-art sports arena for the National Basketball Association's professional basketball team, the *Nets*, with 105 suites overall. The arena also will be used for hockey, concert events, and other theatrical presentations.

The arena will consist of 8 levels (Event, Mezzanine, Main Concourse, Lower Suite, Upper Suite, Upper Concourse, Mechanical Mezzanine, and Catwalk Levels), surrounding 2 structured octagonal-shaped seating bowls (lower and upper).

TV truck parking, loading dock facilities, and trash docks will be located on the east and southeast, as well as a central security command center, a truck turntable, and 2 truck elevators at the southeast corner of the level. A flight of stairs on this corner of the level leads up to a small mezzanine which will contain the electrical switchgear room and several electrical compartments. Press work and dining facilities will be located on the northeast corner.

The foundations will be individual, reinforced concrete, spread column footings, grade beams, continuous strip wall footings, foundation walls, elevator pits, pool pits, turntable pit, and truck elevator pit.

Typical floors will consist of concrete fill, reinforced with #4 or #6 bars at 12" on center, bottom, and top bars parallel to the span and #4 or #6 bars at 12" on center top perpendicular to the span, on 3"-deep, 18-or 20-gauge composite steel floor deck. The slabs will have total thicknesses of 5½", 7½", and 12". They will be supported on rolled-shape structural steel floor beams, girders, and columns. Beams and girders will be provided with welded, headed, shear studs for composite action. Rolled-shape structural steel columns will support the girders and transfer gravity (vertical) loads to the foundation. The girders, columns, and bracing members comprise the braced bents.

A central heating plant will consists of 2 natural gas-fired 400 BHP water tube boilers (Unilux as standard). The heating hot water will be distributed using these 680-gpm circulating pumps (1 is a standby) to serve the arena. The hot water supply and return piping will run horizontally to the service corridor in the Event Level. This main will split into 2 supply and return branch main pipes. One set will serve Quadrants A and D, and the other set will serve Quadrants B and C, to feed AHUs in the respective quadrants.

Three 1,000-ton cooling towers (BAC as standard), totaling 3,000 tons, will be installed on the practice court roof. The cooling towers are sized to include a capacity of 300 tons for the Ice Floor Refrigeration Plant. The central condenser water system will provide sand filter filtration and chemical treatment systems.

A waterside economizer system will be installed that consists of a Plate and Frame Heat Exchanger and pumps. Indirect water circulation of the chilled water and condenser water will provide 1,200 tons of cooling capacity when ambient temperatures are appropriate to affect economizer cooling.

Three 900-ton centrifugal chillers (York as standard) for a total of 2,700 tons of cooling will be installed.

The Arena Bowl and Suites will be heated and cooled by 4 VAV draw-through AHUs and VAV boxes, to be supplied with chilled water and heating hot water by central chilled water and heating hot water plant. Other areas will be provided with DX AC units, HVAC units, fan coil units, cabinet unit heaters, unit heaters, and H & V units exhaust, return, and pressurization fans are installed. The units will be installed in the Upper Mezzanine Mechanical Equipment Room. Each unit will deliver 90,000 CFM of conditioned air that will be distributed utilizing a main loop duct installed adjacent to the catwalk, and with drum louvers mounted on vertical plenum ducts.

Five combined storm and sanitary house sewers will exit the project to connect into the city combined sewer system (four 15" and one 10" combined sewers).

Roof drains will collect the storm water, conducted down in 4 leaders to drain into 3 below-ground storm retention tanks (by others). Tank overflow lines will be piped to the sewer system. A duplex storm water discharge pump will be installed in Quadrant A retention tank and a triplex pump set will be installed in the B/A retention tank that will discharge overflow storm water to the combined sewer system.

The sanitary system will include toilet facilities, saunas, hydrotherapy rooms, kitchens, concessions, prep areas, truck docks, and floor drains in mechanical spaces, laundry areas, locker rooms, bathrooms, and other areas. A duplex ejector pump set will be installed in the mechanical room pit, located under hydro and whirlpool rooms. Waste from the kitchens and food concessions will drain into grease interceptors, and then into the building sanitary system. Sanitary waste from the building will be gathered at the Event Level and will leave the building at 5 locations to connect into the street combined sewers.

A 6" water service from Flatbush Avenue will enter into Quadrant E, equipped with a water meter and double check valve backflow preventer assembly. It will supply water to a 5,000-gal. steel suction tank. Domestic water to the project will be pressure boosted by a quadruplex pump set.

An existing electric utility vault exists at the property line that is available for possible future utility transformers and has been installed by the utility company. Electric service will be provided by 265/460-volt, 3-phase, 4-wire secondary power to the arena. Four metered main service switchboards, each rated at 4,000-amperes will serve the project.

The Arena Event Sports lighting will be served from 2 dedicated risers. The power will be distributed to 4 locations on the catwalk to 1,000-watt clear metal halide sports lighting fixtures mounted on the catwalk handrails and capable of achieving temporary "blackout" by means of a shutter system without extinguishing the lamp. Emergency power will be provided in addition to the normal Event Lighting Power to supply 20% of the arena lighting fixtures and 50% of aisle light fixtures for emergency egress lighting. Arena aisle lighting will be theatrical 575-watt incandescent fixtures, with rotating shutter assembly, mounted on the catwalk handrails.

Automatic sprinklers will provide protection in all areas of the building with the exception of the seating bowl. The main building will be separated into 4 sprinkler zones on each floor level. Each automatic sprinkler zone control station will include a zone isolation valve with tamper switch, check valve, flow control switch, pressure gauge, and test and drain assembly.

There will be a combination fire standpipe/sprinkler standpipes for the 4 zones fed from a 6" fire protection loop at Event Level 1.

A 90 psi, 1,000-gpm, electric-powered fire pump and an electric jockey pump will supply a 6" fire protection water loop routed around the ceiling of Event Level 1 to supply water to combination standpipes in each of the 4 stair towers of the building.

SUSTAINABILITY

General - LEED Summary

We have received an updated LEED scorecard of credits being sought, dated June 3, 2011 (note that the previous scorecard reviewed was as of January 14, 2011).

The Arena is pursuing a LEED certification as its guide map to sustainability. Subsequent to our previous review, the Project continues to identify 34 points that are likely achievable, but 3 of these are listed as deferred. The number of additional, possible points has been reduced to 2 (from 6), both of which are in the energy and atmosphere category. There are still 5 other potential points that are listed as difficult, but could be sought if needed. A Silver rating would require 33 - 38 points, based on LEED NC v2.2, which the Project was filed under; a Silver rating appears possible at this point. It is noted that a Gold rating would require at least 39 points; this is no longer considered possible without 3 of the difficult credits (and the 3 deferred credits still being counted.)

Within the Sustainable Sites (SS) category, there are still 9 points that are being sought and 1 that is now deferred. The deferred credit relates to the use of alternate fuel or hybrid shuttle busses being used. It is thought that if this point is applicable it may relate to future off-site parking, but is listed as "deferred until construction document review." Of the credits being sought, there are 4 items that have been documented: 1 that is considered to qualify and 4 additional items that are in progress. The point not indicated to be in progress, but considered to qualify, relates to typical light gray sidewalks satisfying the requirement for non-roof heat island effect reduction; however, the actual construction of the sidewalks is not imminent. Certain credits are inherent in the Project's design and location, and exemplary performance has now been documented for SS4.1 (alternative transportation - public transportation access).

The same 4 Water Efficiency (WE) credits are still being sought. Half have been documented and half are in progress. The water use reduction of 32% is still planned for the public area restrooms.

In the Energy and Atmosphere (EA) category, the energy model and refrigerant use prerequisites have been documented, and a commissioning agent is on board (First New York) to satisfy the last prerequisite. Of the 5 credits still being sought, 3 have been documented and 2, related to enhanced commissioning, and measurement and verification, remain to be documented. An additional point relating to the purchase of green power is being held off pending the need to obtain this point, as it represents a direct cost and is not related to work being put in place. This credit is 1 of the 5 listed as difficult.

No changes were noted for the 5 credits in the Materials and Resources (MR) section, but progress was noted with respect to recycling prerequisite, which has now been documented. There are still 2 additional pending credits: 1 possible relating to the use of (FSC) certified wood, and 1 difficult relating to reaching a 20% level of products purchased locally.

No significant changes were noted in the Indoor Environmental Quality (EQ) section with 6 credits still being sought along with 1 possible and 1 difficult additional credit. Progress was noted with the prerequisites and 2 credits now listed as documented. The difficult point related to outdoor air delivery monitoring is in progress with F&K determining if the requirement is met by the original design. The other possible credit still being carried relates to flushing out the space or doing extensive testing after construction but prior to occupancy. The cost of this credit was identified as being \$80,000, and a decision will be made in the future whether this credit is needed to achieve the rating level desired (potentially Silver).

For the Innovation in Design (ID) section, changes have occurred, but there are still 5 credits included generally for exemplary performance. As noted above, the public transportation access has been documented, and the point for having a LEED AP involved is likely. There are 3 credits for a green cleaning program, additional water savings, and the reduction in personal automobile use by using an online payment system.

The amounts requisitioned under General Conditions, Fee, Design Fees, and Pre-Construction Estimating Services constitute the major portion of the difference between the amount paid to date and Lien Waivers made available to date.

Please note that our office is not performing a detailed accounting of Lien Waiver amounts paid to date for each Subcontractor. We are calculating the total of all Lien Waivers to date to ascertain whether the total amount paid to date generally conforms to the most recently funded requisition amount.

SECTION X - CONSTRUCTION SCHEDULE

Rate of Progress and Estimated Completion Date

The latest Executive Level Summary AS 23, dated January 11, 2012 (Data Date), indicates substantial completion of the Arena to be attained by September 5, 2012, and the Site Work will be substantially completed in concurrence with the Arena.

Punch list work and Subcontractor close-outs will extend the construction term to a final completion date of June 30, 2013.

The following Schedule indicates the latest important milestones:

<u>Arena</u>

Construction Phase	Early Start	Early Finish
Foundations and Footings	06/07/10	06/03/11

First Entertainment Venue (Jay-Z Concert)	-	09/28/12
Start NBA Pre-Season Games	-	10/17/12
Start NBA Regular Season	-	10/31/12

In our opinion, the construction term of 26 months for the Arena is reasonable, provided that adequate manpower is maintained throughout the construction term, and that there are no hold-ups, such as strikes, inclement weather, material shortages, or other unforeseen circumstances.

The GMP provides for an early completion bonus, which under Schedule AS 23, would be earned with completion in July 2012. The following criteria would need to be met:

- a. Owner may use and occupy the Arena
- b. Only punch list items remain
- c. The Architect of Record has issued a Certificate of Substantial Completion
- d. A TCO has been issued

The GMP2, executed as of March 9, 2012, includes all delays, extension of the construction term, consolidation of changes made throughout design development and establishes the final completion date.

The documents are under review and will be included in next period's report.

The original Atlantic Yard and Mass Transit Improvement Construction Schedule, dated January 17, 2011, was provided for our review. The latest Schedule prepared by John Civetta & Sons, Inc., dated April 20, 2012, indicates mobilization of the Project began on August 2, 2010, with completion scheduled for July 13, 2012.

The original construction term of 20 months (August 2, 2010 - April 2, 2012) was reasonable, but due to early delays, the Construction Schedule had slipped by approximately 3½ months.

Note that the Transit Connection is scheduled to open in conjunction with the Arena; therefore, the slippage will have no impact on the overall project schedule.

Manpower

According to the General Contractor and the Manpower Log, 520 persons have been on the job for the Arena and 62 persons for the Transit Connection this month. The decrease in manpower for the arena is attributed to the completion of the steel work, but an increase in the roofing, carpentry, and finish trades. The Transit Connection is substantially complete with the interior work while the finish materials and canopy work is ongoing. Daily Manpower Logs, in chronological order, are being made available at the job site and will be reviewed periodically by our office.

Approximately 16.3% and 6.3% of the contract values on the project are attributed to MBE and WBE companies, respectively.

Construction Progress Chart

We are enclosing our own Construction Progress Chart on which we have plotted actual construction progress versus the projected construction progress. This chart, based on cash flow projections, gives you an idea as to how the project is progressing on a month-to-month basis.

Note the Arena is slightly ahead of schedule, while the Transit Connection is approximately 3½ months behind its original schedule.
